Please add the following new claims:

Ų,

(New) A protective layer that is relatively permeable for CO₂ and is relatively impermeable for SO₂, comprising:

a gas-permeable carrier made of a material that is resistant to sulfuric acid media including SO₂ and SO₃; and

a surface that can be exposed to a gas and is provided with an oxidizing agent having an oxidation potential that is sufficient to oxidize SO₂.

- (New) The protective layer according to claim 13, wherein: the oxidizing agent is a nonvolatile oxidizing agent.
- (New) The protective layer according to claim 13, wherein: the oxidizing agent includes potassium permanganate.
- (New) The protective layer according to claim 13, wherein: the gas-permeable carrier includes aluminum oxide.
- (New) The protective layer according to claim 13, wherein:

 the gas-permeable carrier includes at least one tube having an inside wall provided with the oxidizing agent.
- (New) The protective layer according to claim 17, wherein:

 the gas-permeable carrier includes a block having a plurality of axially parallel cylindrical tubes aligned side by side.
- (New) The protective layer according to claim 18, wherein: the cylindrical tubes correspond to round cylinders.
